

Optimise

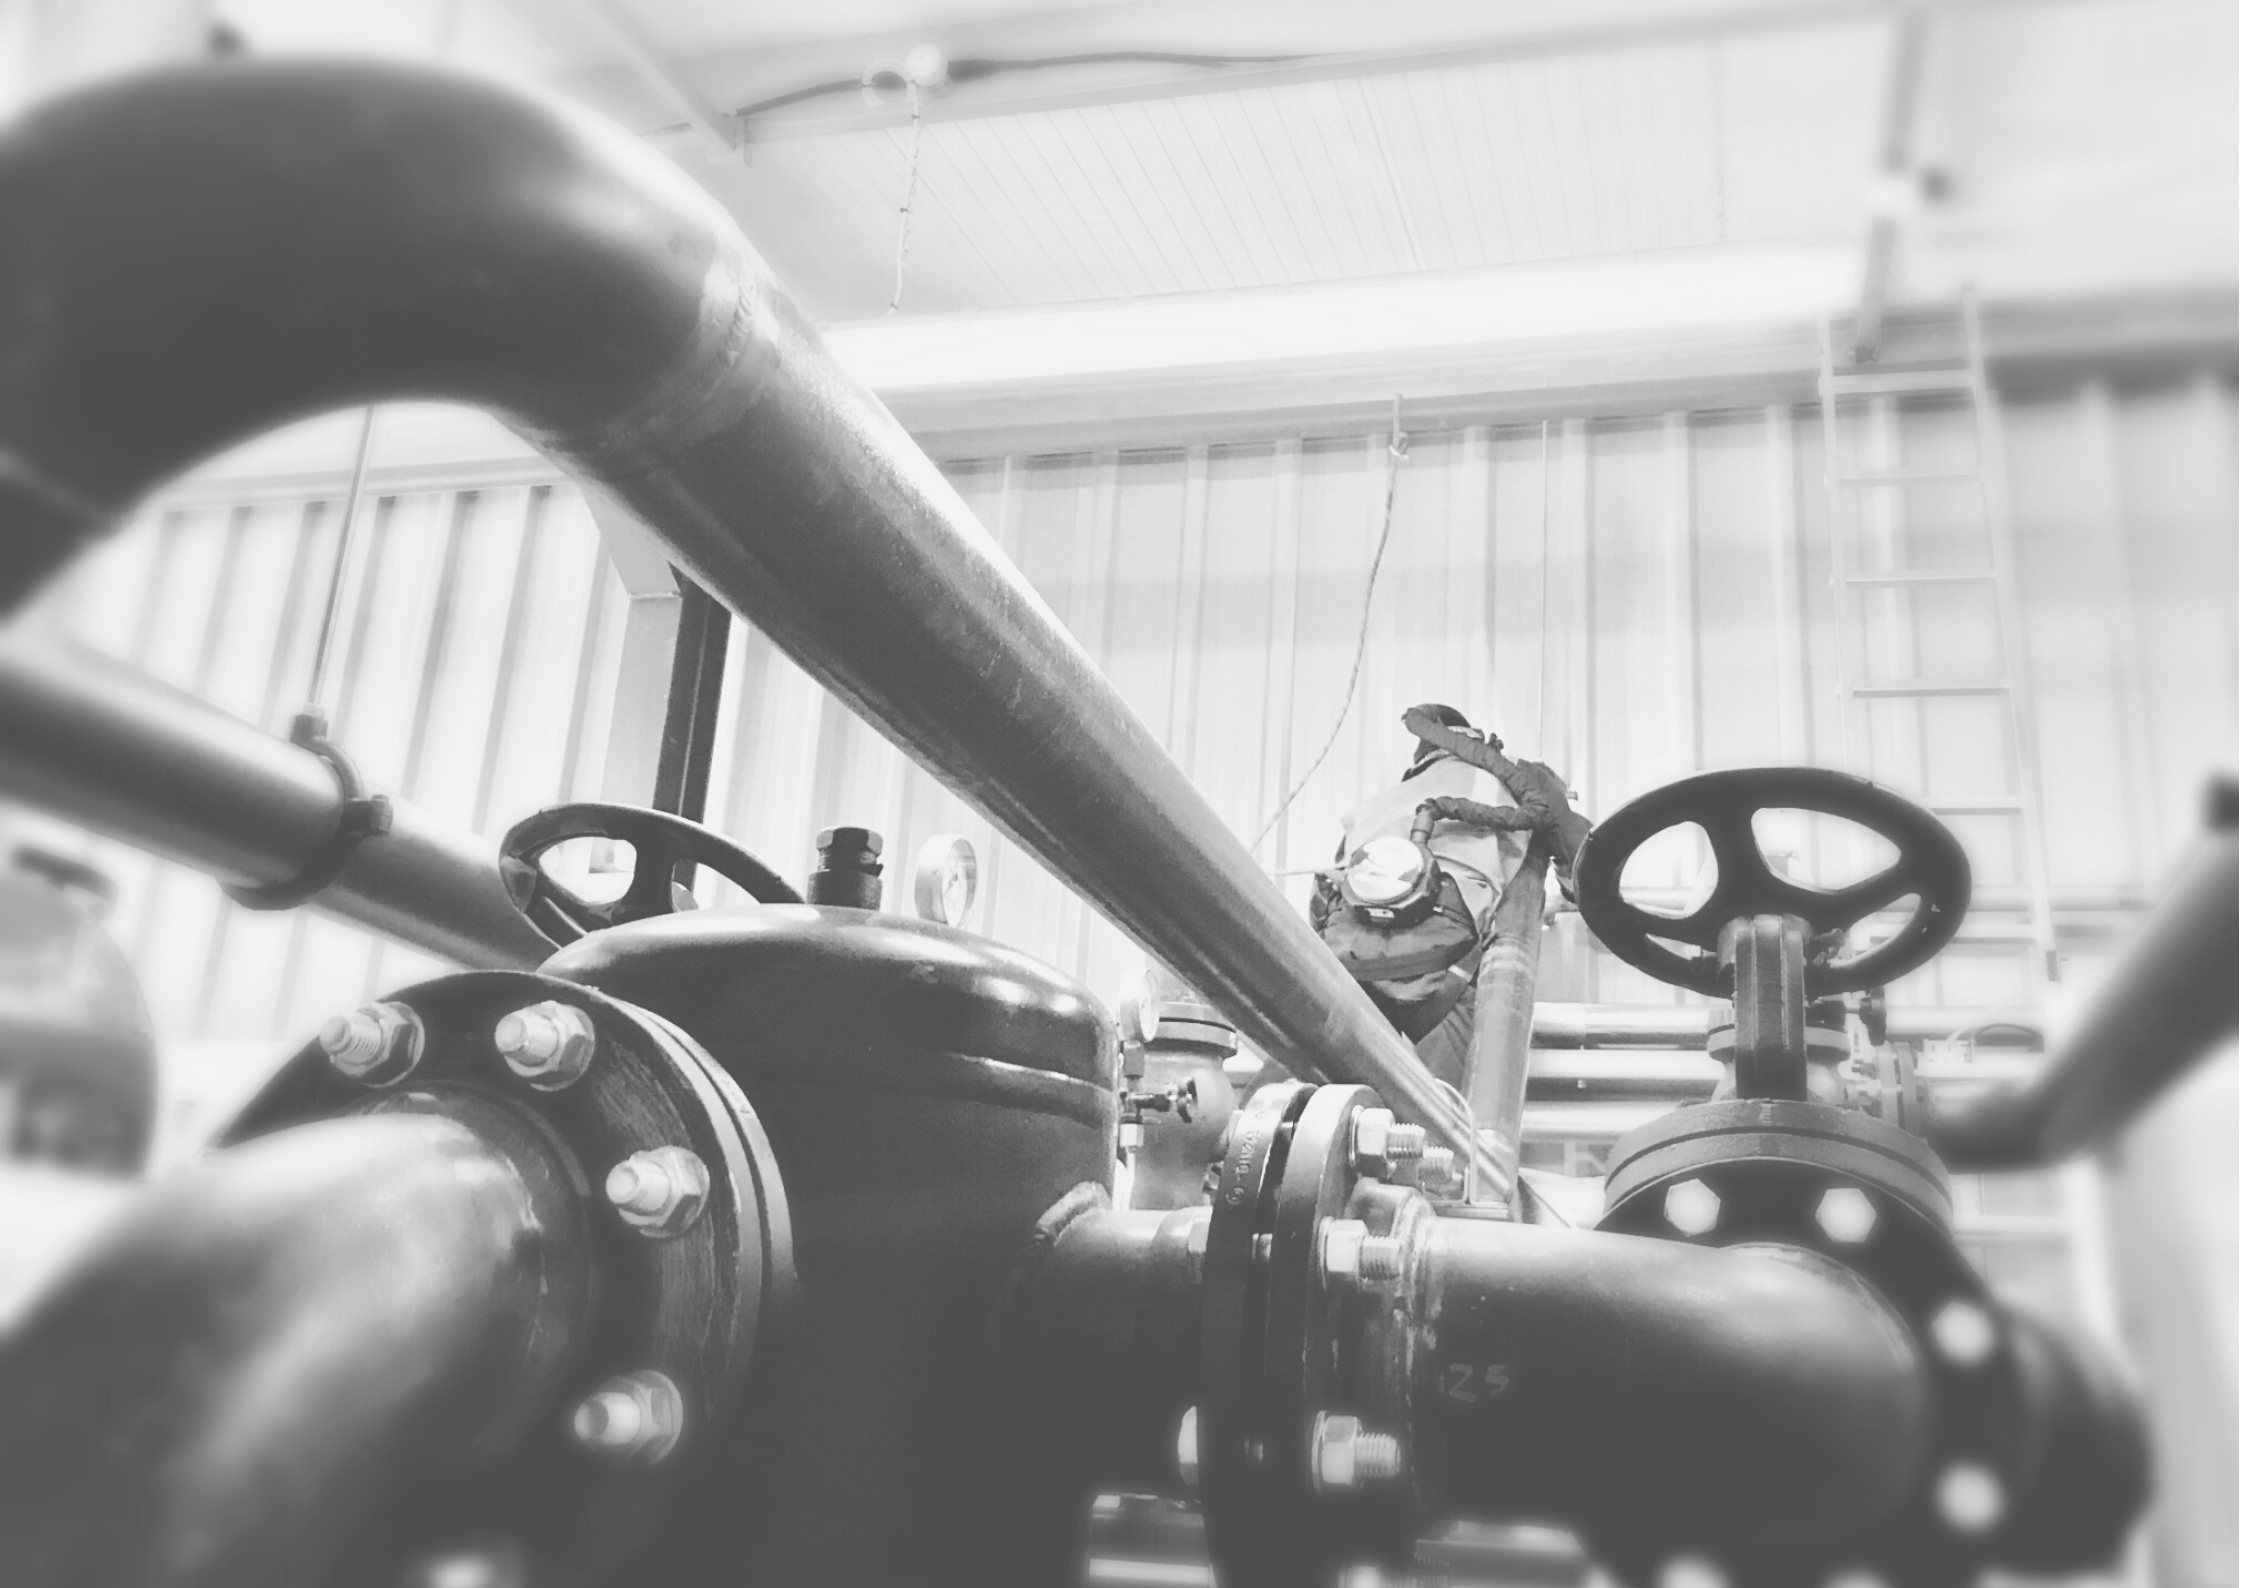

We supply and install pressure reducing valves to reduce steam pressure to the rating of the equipment it is supplying.

Specialists
in steam.

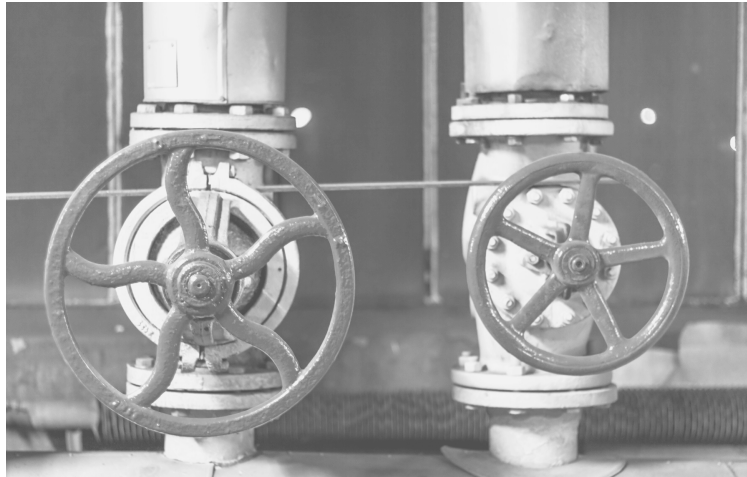

Here at optimise we will select and size the required control valve that meets your systems requirements. Be it simply on/off valves or a more precise modulating valve controlling jacketed pans ,stills ,hot liquor and tanks, or maybe a steam-to-water plate heat exchanger.

We supply and install a wide range of safety valves to protect boilers and equipment from over pressurizing should a down steam pressure reducing valve fail.

We supply and install pressure sustaining valves to stop your boiler from priming should your steam demand be near to the boilers capacity.
